Setting the Standard in Motor Home Quality.

Fleetwood® prototypes are exposed to thousands of miles of durability testing. Those components that don't survive are redesigned until they do. This sets our standard in safety and durability.

- 1** Fleetwood's Tuff-Ply roofing technology is one of the most durable roofing materials on the market and also resists radiation by reflecting sunlight (reduces chalking). White roof material minimizes heat build-up, keeping the temperature cool and comfortable.
- 2** Reliable TuffPEX® plumbing runs throughout each vehicle creating a durable seal on all internal tubing. TuffPEX® assures water flow and functions in the coldest of temperatures. The TuffPEX® system is an industry leader in quality plumbing.
- 3** For each outer wall, Fleetwood uses one seamless, solid piece of its exclusive Tuff-Coat® fiberglass composite. It resists UV rays, cracks and impacts. Our products look newer longer and that's a big plus at resale time.
- 4** To assure a strong, weather-resistant structure, Fleetwood Vacu-bonds® all sidewalls, floors and ceilings to a durable aluminum or steel frame. The Vacu-bond® process is unmatched by many competitors.
- 5** High Density block foam insulation is precisely cut to fit between framing members. This insures maximum insulation throughout the vehicle.

Drawings are for illustrative purpose only to highlight aspects of motor home construction. Actual motor home design depends on model and is subject to change.
