

Jamboree GT

Are you finally ready to celebrate life...?

CELEBRATE ROOM TO MOVE IN YOUR JAMBOREE GT.

The Jamboree GT features a festival of good living amenities, starting with a roomy, fully equipped galley with a large viewing window at the dinette. It's all right there for you to cook or entertain, including a single-lever galley faucet, a large knife rack, color coordinated appliances, décor glass on the galley overhead cabinet doors and even a liquid soap dispenser in the sink.

Choose from three new and very stylish décor offerings that are matched with Windsor birch wood throughout the Jamboree GT. Our patented Slider Bunk above the cab works perfectly for living and sleeping comfortably. Plus, there are new, stylish, Ultraleather bucket seats that come standard, and convenient features such as a generator start switch in the dash area and a standard bunk ladder.

20 POINTS OF CONSTRUCTION

1. "Tuff-Coat®" smooth high-gloss exterior siding - more than twice as thick as most fiberglass siding used by other manufacturers.

2. Welded extruded aluminum tube framing - lightweight, yet provides a superior structural foundation to the exterior hull assembly.

3. High-density block foam insulation - precisely cut to fit tightly between framing members and ensure maximum insulation value.

4. Interior wall panel - finished with resilient and easy-to-clean decorative vinyl.

5. Vacu-bond® lamination - our exterior walls, floor, and roof are manufactured using Fleetwood's own "Vacu-bond®" lamination system.

6. Floor support trusses - constructed from extruded aluminum tubing and laminated with a moisture-resistant and easy-to-clean fiberglass skin. The high-density foam blocking core adds insulation and sound-reduction qualities.

13. Windows - slider and Jalousie windows are tinted and are among the largest offered in any Class C Motor Home.

14. Window installation - Fleetwood's multi-step sealing method utilizes several proven sealant components, such as anti-wicking, extruded rubber molding, and non-yellowing silicone.

15. Storage compartments - formed from corrosion-resistant galvanized steel, the corner seams are machine-rolled and sealed to keep your cargo dry. Interior surfaces are lined with an easy-to-clean and durable indoor/outdoor fabric.

16. Premium aluminum luggage doors - our insulated, strut-assisted luggage doors are a full 1 1/4" thick and feature a smooth exterior aluminum skin face and single paddle latch.

17. Refrigerator vent compartment - extra protection from exterior elements is provided by a heavy gauge metal pan, not just wood paneling.

7. Floor construction - a composite sandwich of plywood decking, extruded aluminum tubing, extra high-density foam block insulation, and aluminum skin moisture barrier, results in a strong, rigid, and well-insulated floor construction. We do not use wood stick framing in our floors like some others.

8. Roof construction - our "crown-shaped" roof is formed using tapered high-density foam panels and contour-formed extruded aluminum tube ribbing. This design is very efficient in shedding water and is stronger than most flat roof designs.

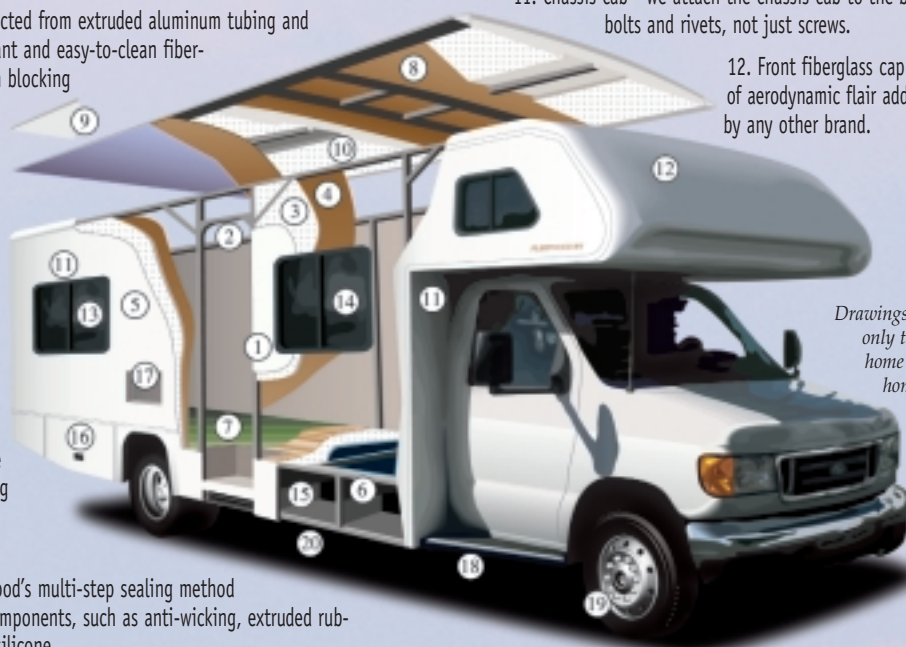

9. Royal "Tuff-Ply™" roof cover - this durable, seamless one-piece membrane is solid color.

10. Ducted air conditioning - air ducts are integrated right into the ceiling structure.

11. Chassis cab - we attach the chassis cab to the box using a series of high-strength bolts and rivets, not just screws.

12. Front fiberglass cap - contemporary styling and a sense of aerodynamic flair add up to a distinctive look not rivaled by any other brand.

Drawings are for illustrative purpose only to highlight aspects of motor home construction. Actual motor home design depends on model and is subject to change.

18. Running boards - our running boards are custom-formed from heavy gauge steel and powder coated for lasting strength and durability.

19. Alcoa aluminum wheels - high-end Alcoa aluminum alloy wheels adds a beautiful and distinctive touch that simply cannot be duplicated by typical chrome finish wheel simulators or hub caps.

20. Undercoating - automotive-quality undercoating is applied to the under carriage to provide an extra barrier of protection against moisture, road salts, and other corrosive elements, as well as insulate against road noise.
